Partner: T.C. Vilsa
Product: Rio Pro
Scale: 35,000+ credentials
Location: Los Cabos, Mexico

Securing the world's leaders

European Triathlon Championships

Partner: Heyden Securit GmbH
Product: Rio Pro Xtended
Scale: 1,500+ credentials
Location: Roth, Germany

Securing world class endurance

Trusted ID issuance on your desktop

Secure and backed with market leading warranties - the Magicard range of ID card printers from Ultra ID.

Pronto

A robust ID card printer for basic credential issuance. Incredibly easy to use with drop-in dye film, hand-fed card loading and rewrite capability.

Enduro+

Batch printing for medium volume issuance. Available as single or double-sided with hand-fed and rewrite capabilities. Users can also upgrade the Enduro+ with unique drop-in kits.

Rio PRO

Built for heavy use. The Rio Pro is ideal for high volume, high security and high speed applications. Features a full range of security options including a customisable visual security watermark.

Prima 4

Using reverse-transfer technology, the Prima 4 produces photo quality cards, comparable to offset litho printing. The in-line laminator option provides additional card durability and security.

Securing identities

Trusted visual security

Available with all Magicard direct-to-card printers, HoloKote® is patented technology that frosts a secure watermark onto the card's surface during printing.

Using the Magicard Rio Pro, this watermark can be customised to a unique logo or security design.

Visual security options on the Prima 4 include UV printing and holographic laminates.

Trusted tamperproof security

Fully compatible with the Magicard Prima 4, the Ultra LE desktop laser engraver enables the instant issuance of personalised high resolution colour ID cards with laser etched features.

This engraved visual security is both durable and difficult to replicate or alter.

Trusted electronic security

All Ultra ID desktop personalisation options, including the entire Magicard range, can be fitted with magnetic stripe or smart card encoders to enable secure electronic data to be written to the card as it is being printed.

Proximity without compromise

Cost-effective proximity credentials for reliable printing and seamless integration.

UltraSecure proximity cards are a high quality, reliable alternative for your proximity access control applications. Available with both PVC and durable PET composite construction, UltraSecure cards are meant to last. All credentials feature a lifetime warranty and are manufactured in Visa® and MasterCard® ISO 9001 certified facilities.

Every card seamlessly integrates with existing access control systems including HID Wiegand, Corporate 1000 and GE/Indala. A read/write chip allows over 137 billion unique codes and ensures compatibility with 26-40 bit proximity installations.

UltraSecure cards are available for localised personalisation or can be supplied programmed and pre-printed with facility and card number codes from one of Ultra ID's global card personalisation centers.

User friendly, professional ID issuance software

Fast, simple, powerful. This is card software you can actually use.

TrustID was developed to meet the needs of all card-issuing organisations. Its intuitive, drag and drop interface requires no prior knowledge in design or the creation of databases, making it ideal to create and print secure identification cards in significantly less time than traditional card software. TrustID demystifies card issuance, enabling you to focus on your people, instead of your software.

TrustID delivers:

- Integrated database
- 2D/3D barcode support
- Smart card encoding
- Advanced camera support
- Seamless data integration
- Lifetime technical support
